

PENTAMIX APL 14

OVERVIEW

Pentamix APL 14 is an additive in powder form able to reduce the thickness of the film in cementitious tile adhesives and to delay its formation.

ADVANTAGES

It increases the open time of the adhesive and enhances its tensile strength.

In self-levelling screeds, it helps improving the penetration and the spreading of the layers following the first. It also improves the thixotropy in concrete repair mortars.

PACKAGING

25 kg paper bag.

Effects of **Pentamix APL 14** on tensile strengths in a cementitious adhesive formulated with our modified cellulose **Penta EC 4119**
